Fire Systems

LSF Residential Packaged Fire Pumps

Our LSF model residential fire pumps are the result of three decades of constant testing and development. Every system is hand built using only time-tested quality components.

LSF packaged systems are designed with as small a footprint as possible without scrimping on features. These are powerful, full-featured pumps still small enough to hide in a corner.

Our proprietary Run-Time Controller ensures reliable automatic pump performance far beyond industry standards. Featuring a minimum run timer tied to the pressure switch, our control suite eliminates fire pump rapid cycling - the #1 killer of residential fire pumps.

Every LSF packaged system is tested for quality & performance prior to shipment to guarantee fail-safe operation right out of the box.

Take advantage of our experience. With over 10 models offering fire water flows from 30 to 170 GPM, and pressures over 100 PSI, Talco has you covered.
